

## BACKGROUND

The Australian energy and utility sector is undergoing a significant transformation towards renewable energy integration, smart grid technologies, and digitalisation.

## ALTITUDE CHALLENGE

Altitude is experiencing a growing demand for expertise from clients in energy and utility technology systems.

## OBJECTIVE

Build an apt system capable of analysing, designing, and implementing complex technology solutions.

## THE SOLUTION ▼

Altitude requires to engage a resource who possesses extensive experience as an Information Technology Business Analyst with a proven track record in the enterprise energy and utility sector.

Extensive experience in analysing business requirements for energy and utility technology projects.

Expertise in designing and implementing solutions aligned with industry standards and regulations.

Strong understanding of energy market operations, grid management systems, business and operation process and data analytics in the utility sector.

## REQUIREMENTS ▼

### FULFILLING A CRITICAL SKILLS GAP

Altitude requires a specialised skillset addressing a critical resource need within the Australian energy market and the broader energy and utility sector. This resource requires expertise in planning, execution, delivery and testing of complex technology projects for major utility players like (Australian Energy Market Operator) AEMO, Aggregators and Grid Operators.

### COMPETITIVE ADVANTAGE

Altitude believes that onboarding a seasoned ICT BA with proven track record will help to gain a competitive edge in securing new contracts and projects in the rapidly evolving energy and utility market.

### KNOWLEDGE TRANSFER

Altitude understands knowledge and experience can be transferred to existing staff, fostering a highly skilled team within the utility domain.

## EXPECTED OUTCOME

A system capable of analysing, designing, and implementing complex technology solutions within the energy sector.
